Khushi Gajjar

Data scientist Intern

Available from February 2027 for 6 months

Paris, France | khushigajjar218@gmail.com | +33 7 43 69 77 05 | linkedin.com/in/khushigajjar18 | github.com/khushigajjar

Profile

Data Intelligence student at ISEP Paris with a Computer Science background. I enjoy working on problems where the data is messy, the answer is not obvious, and the solution has to work beyond a notebook. My projects have included resume screening, public-data pipelines, document Q&A, and computer vision on edge devices.

Education

Masters in Data Intelligence, ISEP – École d'ingénieurs du numérique, Paris *Sep 2025 – Jun 2027*

Machine Learning, AI Optimisation, Data Science Fundamentals, Statistical Inference, Time Series Analysis, Databases & Big Data

B.Tech in Computer Science, Navrachana University, India *Oct 2021 – May 2025*

CGPA: 8.13/10 – Object-oriented programming, Machine Learning, Computer Vision, NLP, Data Structures, Deep Learning, Database Management

Experience

Developer – Volunteer, Festival de la Culture, Non-profit Community Organization *Jul 2026 – Present*

- Built and shipped a Flutter and Firebase festival app in a team of 5, published on Google Play and the App Store with 1,000+ downloads.

AI & ML Intern, Param Group of Companies, India *Jan 2025 – May 2025*

- Trained a BERT/spaCy model to score and rank job candidates from resume data, then walked HR through how the scores are produced and where they should not be trusted.
- Cleaned a 5-year dataset collected from inconsistent web sources (Selenium, BeautifulSoup), built features, and trained an ensemble model for live T20 score prediction (89% accuracy).

Data Science & ML Intern, BrainyBeam Technologies, India *May 2024 – Jun 2024*

- Cleaned 7,254 raw records, built 13 features, and trained KNN and Random Forest models for car price prediction (R^2 = 0.92 on held-out data).

Cloud Computing Intern, Academor, India *Jun 2023 – Jul 2023*

- Set up cloud resources on Microsoft Azure and AWS and moved data onto the platforms.

Projects

Water-Energy Nexus – Big Data Pipeline Link

- Built a Docker Compose pipeline (Airflow, Spark) that pulls data from the Electricity Maps and Hub'eau APIs, processes it, and loads it into Elasticsearch. Made Kibana dashboards to compare energy and water consumption.

Bilingual Document Q&A Chatbot (RAG) Link

- Built a French/English chatbot that answers questions from PDFs and returns the source and page with each answer. Stack: Python, Flask, ChromaDB, Sentence-Transformers, and a local Phi-3 model through Ollama. Responses take about 3 seconds.
- Users can upload new PDFs and query them without rebuilding the app. Live demo on Hugging Face Spaces, with the Flask API in Docker.

AeroGuard-Poaching-Anamoly-Detection-System Link

- Detected animals, fire, vehicles and humans at 92% mAP with a YOLO/PyTorch model on a Raspberry Pi 4, sending Twilio SMS alerts in under 2 seconds

Skills & Languages

Data & Statistics	Python (NLP (spaCy, BERT), Pandas, NumPy, Scikit-learn), SQL (PostgreSQL), Feature Engineering, Statistical Inference
ML & Deep Learning	PyTorch, TensorFlow, Keras, Transformers (BERT, GPT), Classification, Anomaly Detection
Big Data & Cloud	Spark, Airflow, Docker, Elasticsearch/Kibana, AWS, Microsoft Azure
NLP & LLMs	RAG, Phi-3, LangChain, Ollama, ChromaDB, spaCy
Tools	Git/GitHub, Flask, Streamlit, MLflow
Languages	English (Fluent), French (A2), Gujarati / Hindi (Native)
